

Overview of Direct Services

Comprehensive Treatment

The KFAC is proud to offer comprehensive, one-on-one behavior analytic treatment programs for children with autism. Comprehensive ABA addresses marked deficits in all areas of functioning, and is individualized to meet the needs of each child. All treatment is overseen by a Board Certified Behavior Analyst, and delivered by a team of Behavior Technicians.

Schedule: Monday-Friday 8:30-3:30

Early Intensive Behavior Intervention Program

EIBI is a comprehensive, one-on-one, behavior analytic treatment program for young children with autism that is typically provided over the course of 4 years. The program address all areas of deficit, and is individualized to meet each child’s need. The goal is to produce meaningful outcomes that aim to “close the gap between the client’s level of functioning and that of typically developing peers,” resulting in a transition to the child’s natural environment.

**Adaptive Program
Ages 6-12**

The adaptive program is comprehensive and intensive and is designed to improve the rate of skill acquisition and reduce behaviors that interfere with learning in less intensive environments. The focus of this program is on functional, practical, and essential skills of everyday life, while increasing independence in home, clinic, and community settings.

**Early Learner Level
Ages 2-4**

The focus of this program is to establish basic language, play and social skills, and preparing early learners to "learn to learn."

**Intermediate Learner Level
Ages 3-6**

The focus of this program is to expand the size and scope of language while developing social interactions and group skills.

**Transition Level
Ages 4-6**

The focus of this program is to acquire advanced language and social interactions with peers and begin to learn from group instruction.

Focused Treatment

The KFAC also offers focused treatments to meet the needs of individuals with autism across the life-span and spectrum. Focused programs are designed to focus on a limited number of targeted areas of intervention and is not limited by age or cognitive level.

Focused ABA Treatment

Counseling

Focused ABA treatment is provided for a limited number of behavioral targets. The treatment may be aimed at minimizing the impact of challenging behavior; or maximizing communication, social or adaptive skills. Treatment can occur between 4-20 hours per week based on the needs of the client

Afterschool Program

Individualized programs offered Monday-Friday from 4:00-6:00

Preschool Plus Program

Half-day programs for children who are transitioning to public or private preschool, but still require ABA treatment to improve core deficits of autism.

Adaptive Plus Program

Half day programs for children who are enrolled in public or private school for the majority of the day, but still require ABA treatment to improve core deficits of autism.

Vocational Rehabilitation Program

Provides assessment and treatment to adults (over 18) with autism using evidence-based practices to maximize outcomes. ABA is used to increase employability skills, and or reduce challenging behavior that may be impeding employment.

Counseling at the KFAC typically utilizes a cognitive-behavioral framework in helping individuals with ASD identify dysfunctional emotions, behaviors, and thought patterns. In this treatment modality, it is important to understand that a person's thought habits also influence ones behavior.
